

Thin Film Lithium-Ion Batteries

ORLI.0.5.CL

The energy and power (see Overview) delivered on discharge of ORLI.0.5.CL batteries between 3.95 V and 2.0 V at 37°C. The data were obtained from cells with the highest (red) and lowest (black) capacities.

Examples of discharge curves from which the energy and power data were obtained. Discharge current (mA): 0.1, 0.4, 1, 2, 5.
